

Hono-R™ (Brady + Iron and Zinc Benefits)

Hono-R is another exciting new entry to our dry, planter-box lineup of exceptional products for your farm. Hono-R contains the well-known and highly effective Bradyrhizobium while also providing more availability to nutrients vitally important to your soybean performance such as Iron (Fe) and Zinc (Zn).

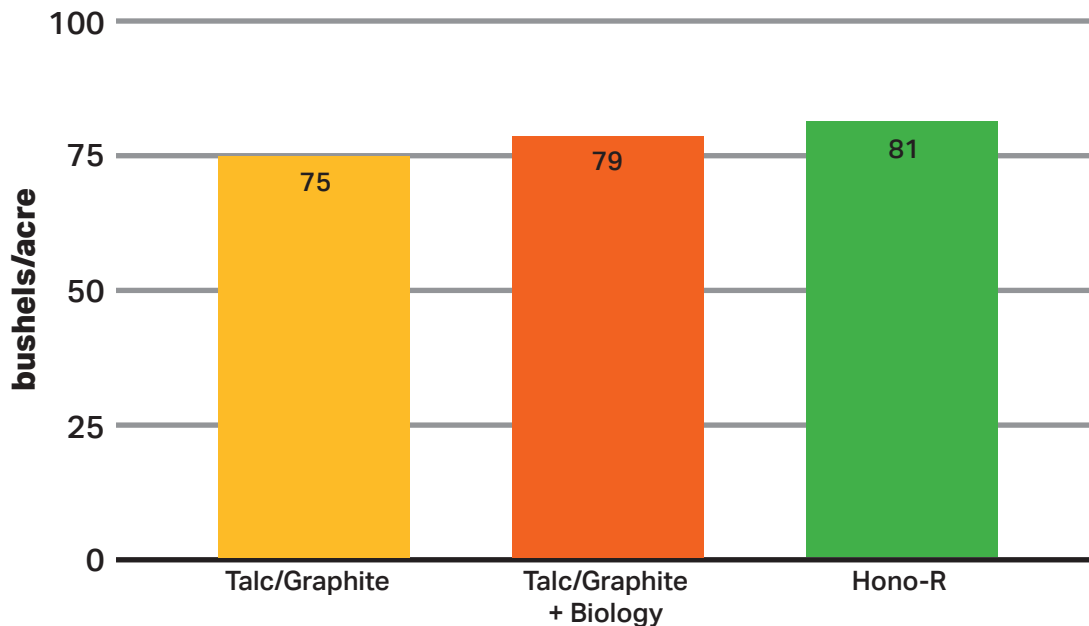

- **Increased Nitrogen Availability** – Produces impressive root nodulation which brings with it the nitrogen-fixing bacteria, important for high-yielding soybeans.
- **Improved Nutrient Availability** – Helps make vital nutrients like Iron and Zinc more readily available throughout the season.
- **Improved Root Structure** – Highly effective in colonizing plant roots.
- **Reduced Stress in the Crop** – Positively regulates plant respiration during times of stress.
- **Higher Return on Your Investment** – The low use rate and lower per acre investment with the many agronomic benefits can put more money in your pocket.
- **Convenient and Easy Application** – Apply over the seed in the planter-box or through the pro-box. It will adhere to the seed and be ready to work as soon as it gets in-furrow.

Available as a Planter-Box (PB) application at ½ oz. per of unit seed.
