Dry wettable powder in water suspension.

## Carry-R™ (In-Furrow or Foliar)

Carry-R Foliar is a strong addition to our Bio-Complex Technology™ lineup. Carry-R is designed as a soy protein wettable powder to deliver plant necessary inclusions effectively and efficiently for both the farmer and the plant.

Carry-R is designed for ease of inclusion in existing foliar blends to further enhance the plant response desired by the foliar products applied. We have tested Carry-R with many of the popular post-emerge products, but we always recommend doing compatibility testing with any materials desired to apply to your crops.

- **Advancing Regenerative Ag** – most ingredients in Carry-R are renewable and sustainable American soy protein, contributing back to American soybean farmers..
- **Improved Soil Conditions** – Excellent starter food for microorganisms and improves microbial growth.
- **Perfect Inclusion Carrier Technology™** – the patented soy protein base provides a food source to any microbes you may add to your foliar mix.
- **Extended Suspension Time** – will stay in suspension by itself for up to 36 hours in water.
- **Clean and easy to use dry wettable powder.**

160 oz package @ 2 oz/acre treats 80 acres

\* Read and follow all labeled instructions
