Vict-R RYZ Soybeans

Vict-R RYZ is the performance product you've been asking for! Built with high-quality, high-performance components such as MicroAlgae, B4, Vict-R PM, DUST™ and the micronutrients Iron, Manganese, Molybdenum, Copper Sulfur and Zinc, Vict-R RYZ is our latest addition to our top performing category of BioStax products.

- **Improved Soil Microbiology:** MicroAlgae feeds beneficial soil microbes, increasing their activity and population. These microbes help in nutrient cycling, breaking down organic matter, and making nutrients more available in the soil.
- **Increased Water Retention:** The organic components improve the soil's water-holding capacity, reducing the need for frequent irrigation and helping plants cope with drought conditions.
- **Boosted Plant Growth and Yield:** The improved soil conditions contribute to faster plant growth, stronger plants, and often increased yields, particularly in nutrient-depleted soils.
- **Reduction in Conventional Fertilizer Needs:** Micro enhances nutrient availability in the soil, potentially reducing the need for synthetic fertilizers, which is especially beneficial in organic or sustainable farming practices.
- **Increased Nutrient Availability:** B4 contains bioactive compounds that enhance microbial activity in the soil, leading to improved nutrient cycling. This helps convert soil nutrients into forms more readily available for plant uptake, thus enhancing plant nutrition.
- **Improved Root Growth:** By fostering an improved soil environment, B4 supports better root growth. Stronger root systems improve nutrient and water absorption, which can lead to more robust plant growth.
- **Improved Plant Resilience:** Plants treated with Vict-R RYZ are often more resistant to environmental stresses, such as drought, and nutrient-deficient soils. This results in more consistent crop performance across different growing conditions.
- **Improved Planting Efficiency:** DUST reduces friction between seeds and planting equipment, leading to smoother planting operations. The lubrication provided by DUST helps reduce wear and tear on both seeds and planting machinery. This minimizes downtime due to mechanical issues and increases planting speed and precision.
- **Enhanced Seed Flow:** By acting as a lubricant, DUST ensures that seeds flow more consistently through the planter. This results in better seed placement and uniformity in planting depth, which is critical for achieving consistent crop emergence.
- **Compatibility with Modern Equipment:** Vict-R RYZ is designed to work well with modern high-speed planting equipment, ensuring that seed lubrication needs are met even in advanced systems.

* Read and follow all labeled instructions

Also available **Vict-R PM.**
